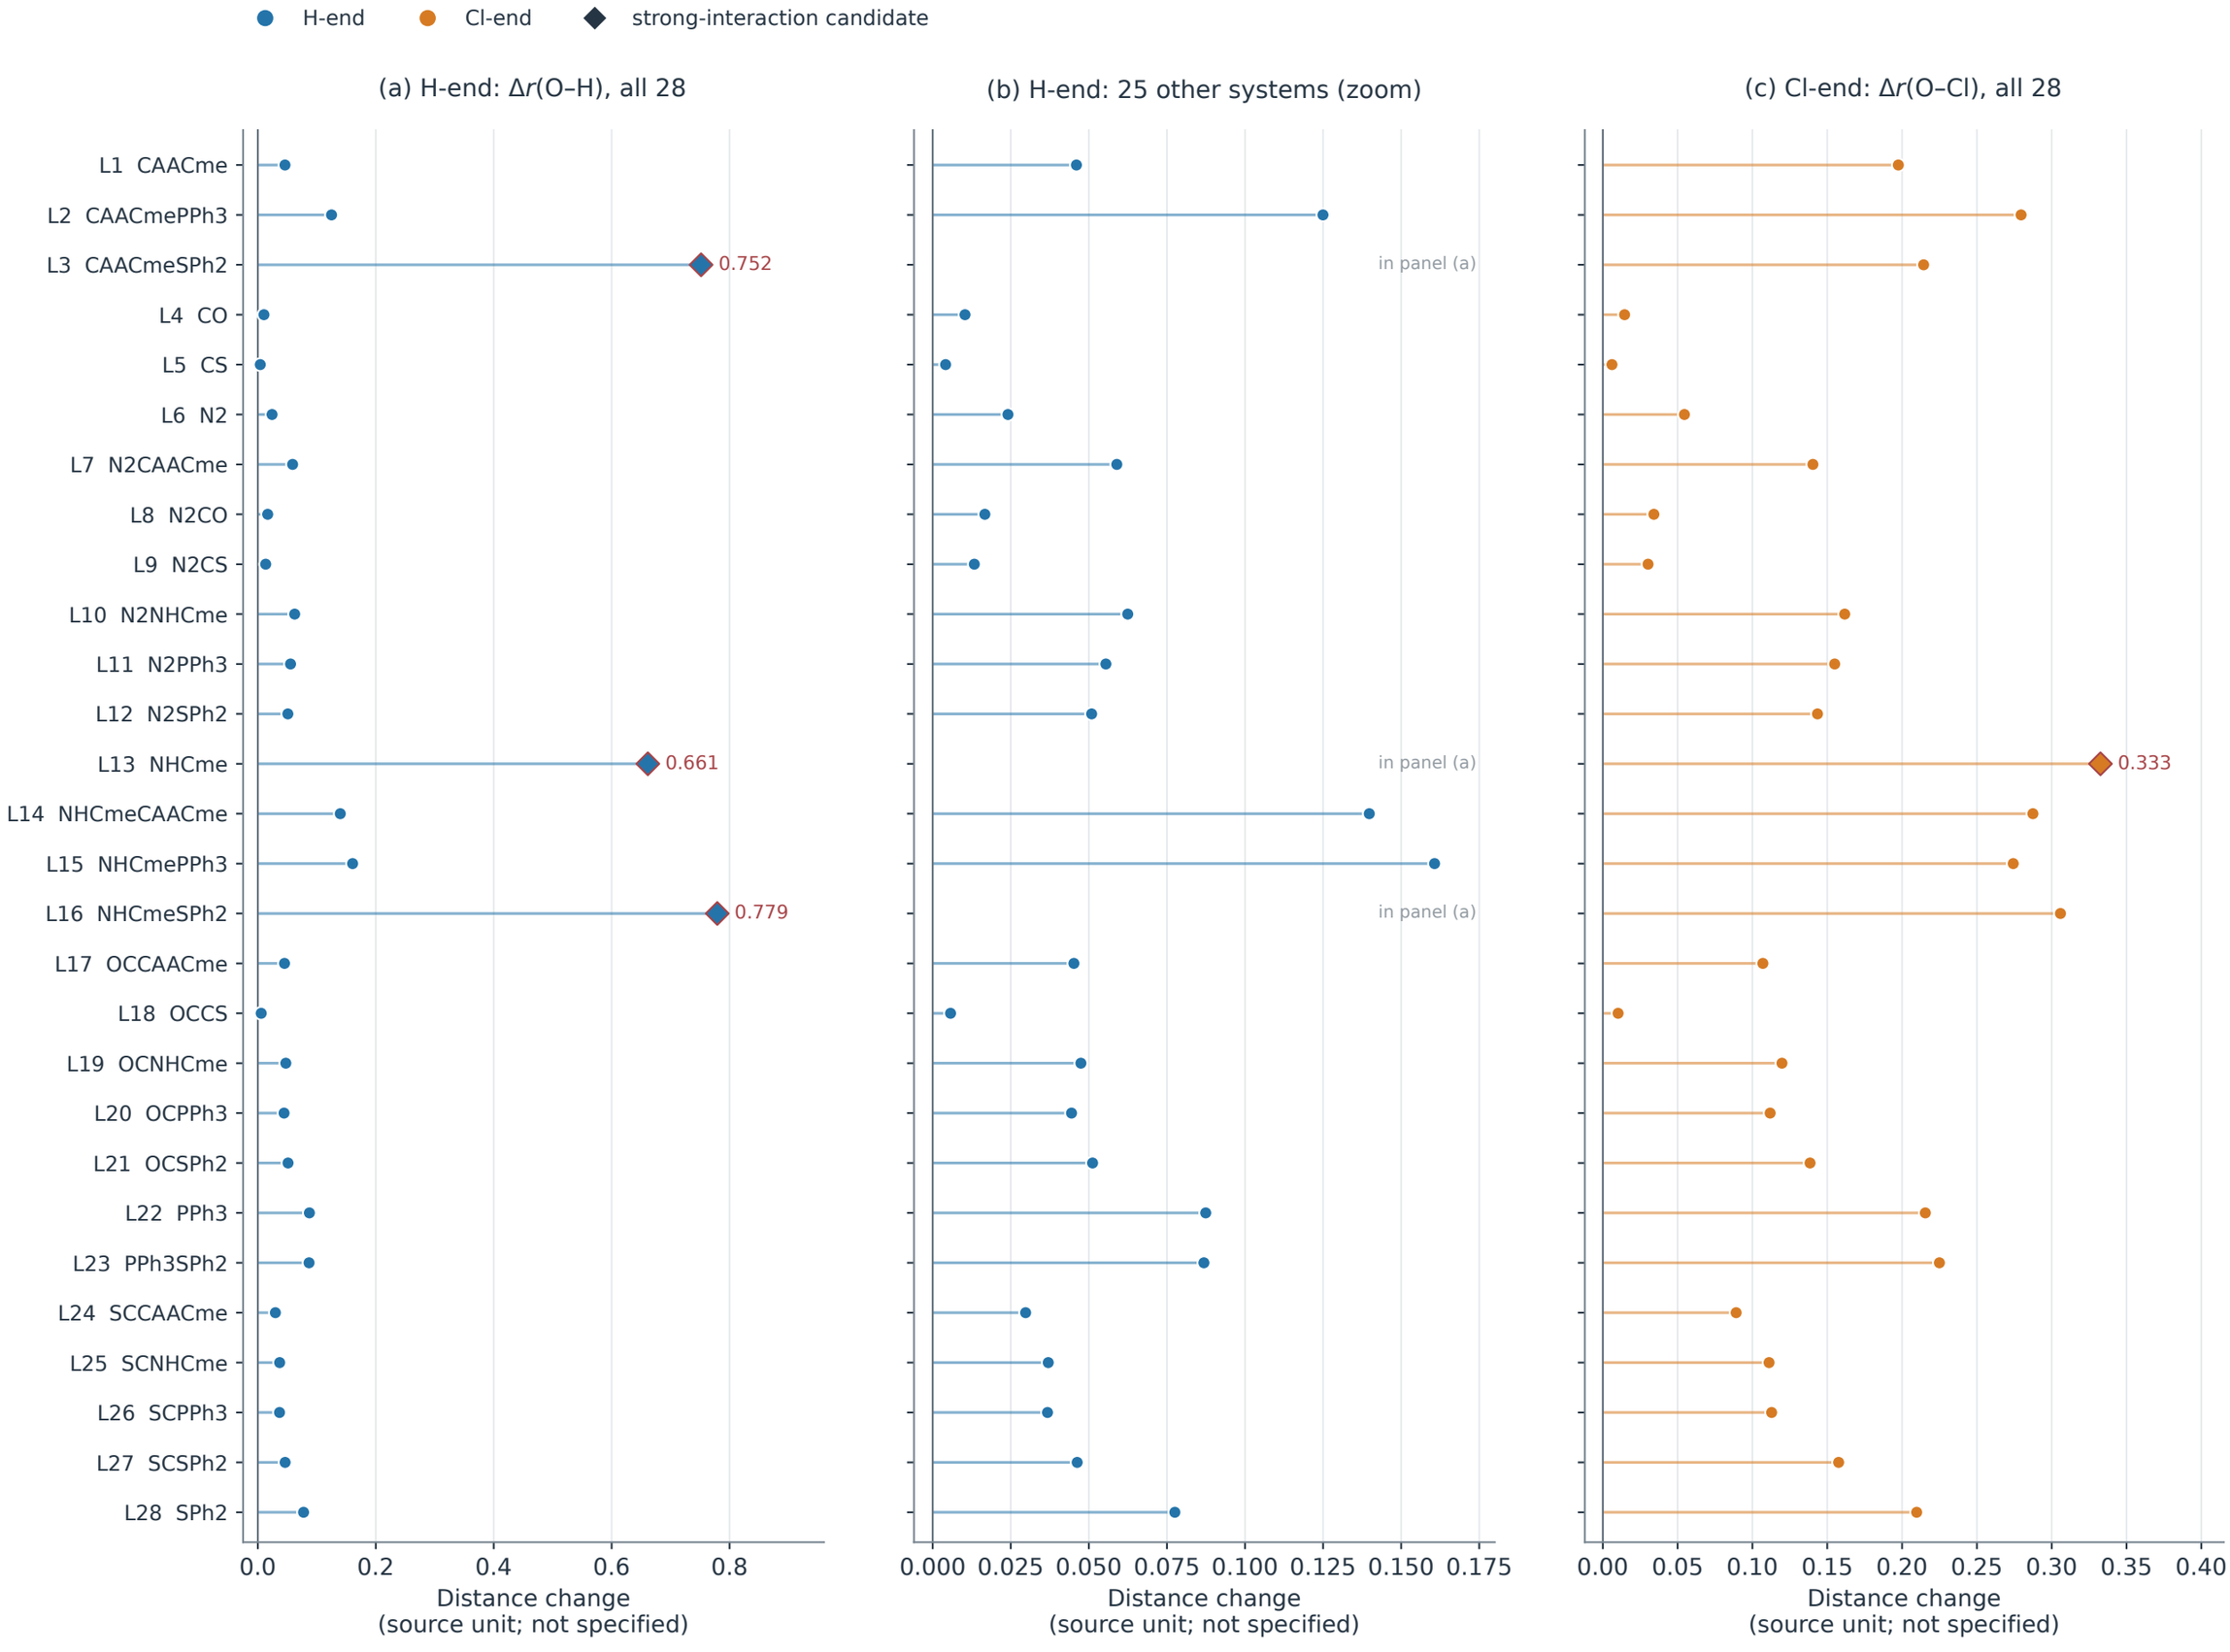
Fig. 1 Internal-bond response to complex formation

Provisional data audit | distances retain the workbook's unspecified source unit



Changes are recalculated relative to the isolated HOCl entries in Structure data!E59 (O–H) and F59 (O–Cl).
Panel (b) magnifies the 25 H-end systems outside the three highlighted H-end candidates; no points are silently discarded.
Geometry alone does not demonstrate proton transfer, chlorine transfer, or a specific bond category.
